

USB SECURITY DEVICE MANAGEMENT

A9X USB MANAGER SOFTWARE

Is a USB management and security application developed by A9X to protect ship networks and OT systems which are often updated onboard by using USB mass storage media devices. Security Management for Removable Media, including all USB devices is also recommended by BIMCO for IMO 428 (98) Cyber Risk Management at Sea compliance.

A9X USB Manager (AUM) is integrated with A9X Cyber Detective (ACD), and can be automatically deployed, enabled, and administered over the ACD platform, with configuration, monitoring and reporting via the ACD Dashboard. It will block all unauthorized personal from inserting USB devices, including blocking USB devices from being inserted into specific machines. A9X USB Manager works in both on-line or off-line modes and will log all authorized / unauthorized access.

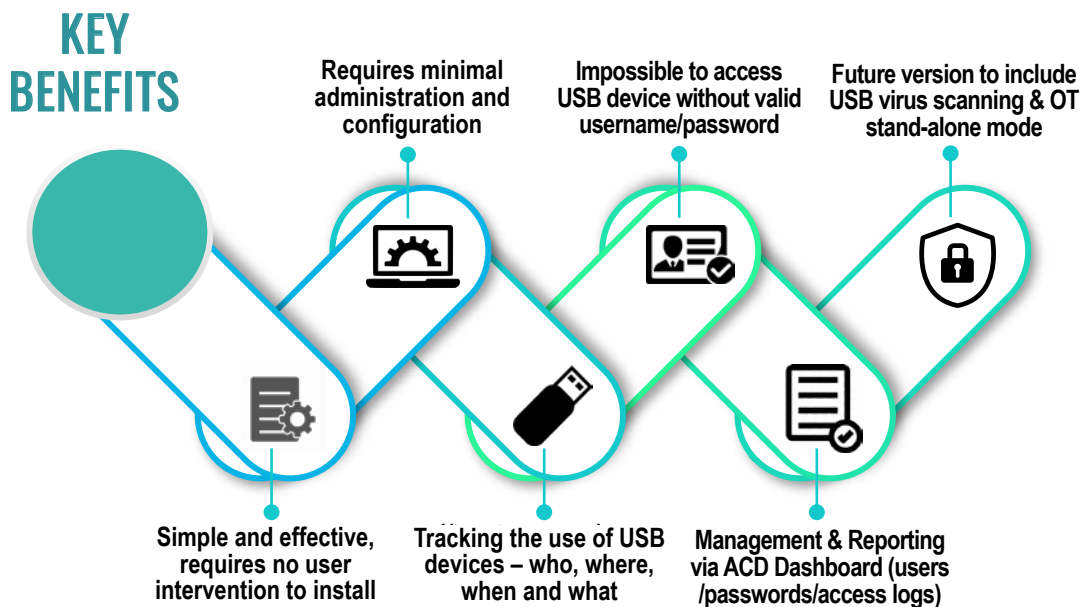

A simple, yet efficient software only solution, AUM is easy to install and administer remotely.
